Abstracts

The Asia Pacific Switch Mode Power Supply Transformers Market would witness market growth of 4.5% CAGR during the forecast period (2020-2026).

An increase in the number of consumer electronics throughout the world is increasing the demand for the device. Additionally, the increasing use of switch-mode power supply (SMPS) transformers has contributed to high performance, compact design and lower costs. In almost all electronic devices, switching power supplies are used today: they are state-of-the-art in computers and televisions and also in industrial equipment and systems. The switched-mode power supplies earn points compared to analog-controlled power supplies for their high performance, low heating and high reliability. Furthermore, the high frequency of the clock makes small component sizes and low weights which have a positive effect on costs.

Industrial power supplies are predestined for extreme conditions because they are designed to endure elevated temperatures and have a relatively low diameter. Low cost of acquisition, low cost of operation with high efficiency and long service life High efficiency leads to low power dissipation contributing to less heat generation. That in effect reduces the part load, which improves service life and efficiency-resulting in lower operating costs.

In addition to consumer products, SMPS transformers are commonly used in applications such as power tools, railway systems, industrial control systems, office

safety systems, railway systems, and electric vehicles. Consequently, increasing acceptance of the above-mentioned applications is expected to increase demand. In addition, the introduction of electric vehicles is anticipated during the forecast period to fuel market growth.

Based on Type, the market is segmented into AC to DC, DC to DC, DC to AC and AC to DC. Based on End User, the market is segmented into Consumer Electronics, Communications, Industrial and Others.
