## Abstracts

The Asia Pacific Unified Endpoint Management Market would witness market growth of 40.8% CAGR during the forecast period (2017 – 2023). Unified endpoint management (UEM) is an approach used to secure and control desktops, laptops, smartphones, and tablets in a connected and coherent manner from a single console. Unified endpoint management basically works on the mobile device management (MDM) application program interfaces (APIs) in desktop and mobile operating systems. Growing mobile workforce, rapid adoption of mobile apps, growing security threats, and the need to adhere to strict regulatory compliances relating to data security are some of the complimenting factors that would add to the market expansion. The adoption of next-generation devices such as IoT and smart wearables would offer significant growth opportunities for UEM vendors. The adoption of MDM application program interfaces by Microsoft into Windows 10 has allowed in fully exploring the power of unified endpoint management on a larger scale.
