Abstracts

The Asia Pacific Urinary Drainage Bags Market would witness market growth of 7% CAGR during the forecast period (2020-2026).

The swift increase in the geriatric population is the main factor that is responsible for the growing demand for urinary drainage bags. Numerous changes occur in the urinary system of an old person such as weakening of the bladder muscles, changes in the bladder wall, or blockage of the urethra due to debilitated muscle or in the size of the prostate gland in men. Urinary drainage bags have become a requirement in urinary drainage system infections and other health-related conditions. Additionally, the geriatric population also suffers from bladder control issues like urinary incontinence, leakage or retention, and Chronic Kidney Disease (CKD). Urinary retention is caused by neurological abnormalities, bladder neck obstruction, and the posterior urethral limit are the major concerns in the old age population.

The increasing prevalence of diabetes and hypertension is one of the main factors for increasing the incidence of end-stage renal diseases, which is driving the market. According to the WHO in 2019, approximately 1.1 billion people are suffering from hypertension worldwide. Diabetes is one of the primary reasons for advanced renal failure, which is followed by hypertension, and it is likely to affect about 1.0 billion individuals worldwide. Therefore, an increasing number of patients who are suffering

from end-stage renal diseases is expected to surge the demand for urinary drainage bags, thus advancing market growth over the foreseeable period.

An increase in preference for disposable urine drainage bags over reusable bags is likely to offer profitable opportunities for the growth of this market. This is accredited to the fact that using disposable urine drainage bags reduces the risk of urinary tract infections that are caused due to inadequate cleaning of the bags. Furthermore, technological advancements and product innovation in the capillary blood collection tubes are expected to offer growth opportunities for the growth and expansion of the market.

Based on Product, the market is segmented into Leg Bags and Large Bags. Based on Capacity, the market is segmented into 500-1000 ml, 0-500 ml and 1000-2000 ml. Based on Usage, the market is segmented into Reusable and Disposable. Based on End-use, the market is segmented into Clinics, Hospitals and Other End Uses. Based on countries, the market is segmented into China, Japan, India, South Korea, Singapore, Malaysia, and Rest of Asia Pacific.
