Abstracts

The Asia Pacific Vein Illuminator Market would witness market growth of 32.8% CAGR during the forecast period (2020-2026).

Most of the time locating the vein is challenging depending on the objective difficulty that arose as a result of the patient's particular physical features such as fatty tissue, skin color, age, etc. thus producing a more painful patient experience. To alleviate such situations, many novel devices were invented to help paramedics and nurses find the veins in real-time and determine the needle's best insertion point. The creation of a digital image using infrared detection and light projection technology a vein illuminator allows for the location of veins, valves, and deep bifurcations up to 15 mm, thus reducing pain and anxiety and minimally invasive patient experience.

Intravenous access may be required for different reasons and in multiple environments like hospitals, outpatient care facilities, homes, hospital schools, and outpatient surgery facilities. Similarly, peripheral IV catheter therapy is gaining prominence among both doctors and patients. The benefits of improved success in obtaining peripheral IV access, decreased usage of central lines and improved cost savings have been recognized by hospitals. These factors commutatively define the growing popularity of vein illuminators and their increasing market size.

Increasing implementation of intravenous (IV) therapy and technological advancements that integrate into the process of assessing, planning, intervening, and evaluating the insertion of PIV catheters are also key drivers of market growth. At the same time, substantial investments in healthcare to promote research and development programs are promoting the market growth.
