## Abstracts

The Asia Pacific Video Surveillance Market would witness market growth of 15.2% CAGR during the forecast period (2019–2025).

Due to an increase in the adoption of advanced surveillance by the government sector, manufacturers are realizing the need for optimum IP surveillance systems. There are several advantages which determine that IP camera CCTV systems offer over an analog format. IP security cameras send their signal over a network, allowing greater information transfer than an analog signal sent to a DVR, which act as major video surveillance market trends. Network cameras can be wireless and work through a network. They are used in big departmental stores, food chains, malls, factory, workshop and many other public places to keep a check of the ongoing activities, which assist in the growth of video surveillance market globally.

The rising terrorism activities in these countries can be perceived as a major factor responsible behind making the governments to adopt IP surveillance for high-security regions and government buildings. For example, in Malaysia, the government is offering subsidized large-scale apartments which are equipped with integrated security systems and NVRs together with the CMX software. Additionally, Asia-Pacific is rising as one of the major adopters of technology specifically within the retail sector. This adoption inclination can be attributed to capabilities like remote monitoring and real-time access control. This region is expected to evolve at the highest CAGR in the video surveillance market over the forecast period.
