Abstracts

The Asia Pacific Walking Aids Market would witness market growth of 7.4% CAGR during the forecast period (2019-2025).

Devices in the market today include a variety of variations for cane, crutches and forearm crutches. The crutches have bands that encircle the upper arms and handles to carry and allow the patient's hands to support the weight of the body. The forearm crutch usually provides support for the cane to the person, but with extra forearm support to aid in mobility. The forearm part helps to improve balance, lateral stability and also decreases wrist load.

The walker (also known as the Zimmer frame) is the most durable walking aid that comprises a free-standing metal frame with three or more contact points, which the person positions in front of them and then holds during movement. The contact points are either fixed rubber ferrules, such as crutches and canes, or wheels, or a variation of both. Wheeled walkers or rollators also come with an inbuilt seat so that the user can rest during use and hold personal belongings with metal pouches.

China's aging population has grown over 240 million. In addition, 85 million people in the country are living with disabilities and 20 million are consumers of temporary disability aid. This growing and the large population of senior citizens and people with disabilities have led to an increase in the demand for rehabilitation products and services. This makes the walking aid industry one of the fastest-growing sectors in China, potentially the largest domestic market in the world. With China's new strategy to

promote the growth of the industry in order to satisfy rising internal demand, foreign firms can prosper from investing in the country's disability aid industry.

Based on Type, the market is segmented into Rollators, Walkers and Others. Based on Rollators Type, the market is segmented into Premium and Low Cost. Based on countries, the market is segmented into China, Japan, India, South Korea, Singapore, Malaysia, and Rest of Asia Pacific.
