Abstracts

Affective computing is human-computer interaction with the ability to detect and accordingly respond to the emotions and other stimuli of the users. The users' emotional state is detected through sources such as facial expressions, posture, gestures, speech, the force or rhythm of key strokes and the temperature changes of the hand on a mouse. These emotional signals are not only detected but also interpreted by the system. Among the major areas of affective computing, the adoption of computational devices to exhibit either innate emotional capabilities or the once with the capability of convincingly simulating emotions are the leading concepts. Based on current technological capabilities, simulation of emotions in conversational agents to enrich and facilitate interactivity between human and machine is a milestone achieved.
