## Abstracts

The Europe Automatic Labeling Machine Market would witness market growth of 4.6% CAGR during the forecast period (2019–2025).

A good product labeling machine will make the product labels look good, attractive, catchy and clear. These are very beneficial to the industrial world as they use novel techniques and save time and money. Labeling machines paste printed labels on the finished products, containers, vials, ampoules, bottles and other packaging material. These are also known as labeler. The labels are self-adhesive labels which have readymade gum on the back side and it can be pasted on the container with little press by the machine. Labeling done manually is a time-consuming job and it is not a professional way of packing the product especially when bulk production is done in a professional way. Using a labeling machine to package the products is time-saving and more professional.

Germany and Italy are called the chief production hub for packaging machinery in Europe. Both these countries export a huge amount of its production to India, Korea, Japan, U.S., and China. Some of the countries for example France, U.K., Italy, and Germany play a significant role in the packaging automation solution market. Many European market companies offer cost-effective, advanced, and user-friendly packaging automation solutions. The complete use and growth of packaging automation solutions particularly in all the European countries which takes initiatives from the European Union helps in the growth of the packaging automation solution market in the specific region.
