## Abstracts

The Europe Automotive Motor Market would witness market growth of 6.5% CAGR during the forecast period (2019-2025).

The automotive market is controlled by an increase in overall vehicle production and a high demand for safety and convenience features. In addition, the rise in the popularity of electric vehicles is expected to create a potential for various developments in electric motor vehicles. The increase in the number of motors installed in a car translates directly into better intelligence and increased convenience by reducing the environmental impact. Nonetheless, an increase in the weight and cost of the overall system limits market growth. In addition, a growing number of applications involving the use of electric motors and the idea of self-propelled cars are expected to create lucrative opportunities for the automotive market in the near future.

The growing demand for electric vehicles, combined with the increasing production of automobiles, is expected to drive the automotive market in the coming years. Automotive motors are commonly used in powertrain systems, car chassis, internal/external comfort control systems and safety systems. At present, these motors are also used in automated doors, sunroof systems, wipers, massage seats and customizable vehicle mirrors. Increased demand for vehicles with these advances is expected to fuel market growth.

Based on Distribution Channel, the market is segmented into Aftermarket and OEM. Based on Application, the market is segmented into Comfort, Safety and Others.
