Abstracts

Tubeless tires run without the need for an inner tube, while the outer casing creates an air tight seal with the rim of the wheel. The tubeless tire is made up of tread, steel belt, and spiral layer. Various functions are smoothly conducted with the help of tubeless tires such as supporting the vehicle load, transmitting traction, absorbing road shocks, etc. Tubeless tires are made up of steel belt covered with resilient rubber and inflated with high-pressure air (nitrogen, CO₂, O₂, and mixture of gases), allowing the tubeless tires work smoothly. The air-tight seals prevent rapid deflation of tires in case of damage or tear. Tubeless tires are also known to provide superior fuel efficiency & heat dissipation, limited need for weight balancing. The aforementioned factors have driven the adoption of tubeless tires across all types of vehicles. However, commercialization of air less tires would hinder the market growth significantly. Air less tires are largely found in heavy-duty vehicles, and off road or construction vehicles. With technological advancements, the air less tires would witness rapid adoption in two-wheelers, passenger cars, etc. Major factors that are driving the market growth are easy puncture repair options, safety during high speed driving, lower tire pressure, better bump absorption, and reduced rotating weight.

Based on Type, the market is segmented into Radial and Bias. Based on Type of Vehicle, the market is segmented into 4-Wheeler, Heavy Vehicles, and 2-Wheeler. Based on Distribution Channel, the market is segmented into Aftermarket Sales and OEM Sales.

Based on country, Automotive Tubeless Tire market is segmented into Germany, UK, France, Russia, Spain, Italy and Rest of Europe. Germany remained the dominant country in the Europe Automotive Tubeless Tire market in 2015. France and Russia would witness promising CAGR during the forecast period (2016-2022).
