Abstracts

The Europe Biosurgery Market would witness market growth of 6% CAGR during the forecast period (2019-2025).

Biosurgery technology has established a new paradigm in wound and tissue management, surgical care, and regenerative healing. Several products under biosurgery have brought in extensive interest among surgeons and patients. This is projected to gain traction in several medical specialties such as gynecology, orthopedic, neurosurgery cardiovascular, and spine-related therapies. The increased need for novel biomaterials for the intra-operative wound as well as tissue management can also be a key trend in improving the biosurgery market. Life sciences companies launch products for surgical care that are highly focused on discovering new avenues in biosurgery by getting involved in relentless development activities.

The European Bio Surgery market's main driver is the strong focus on scientific growth, which in turn leads to the launch of various new products and other technological advances in the area. Along with the growing number of surgeries due to evolving lifestyles and increasing consumer awareness, it will serve as market growth boosters. The main critical factor on the Bio Surgery market in Europe is the inability to accept some products, like human tissue, which is necessary for regenerative purposes due to ethical concerns in some parts of the region. This, along with the high costs and the strict regulations of the government, serves as market restrictions.

Based on Application, the market is segmented into General Surgeries, Orthopedic Surgeries, Neurological Surgeries, Cardiovascular Surgeries and Other Applications. Based on Product, the market is segmented into Surgical sealants, Soft Tissue Attachments, Adhesion Barriers, Hemostatic Agents, Bone Graft Substitutes and Other Products.
