The Europe Cartilage Repair Market would witness market growth of 8.2% CAGR during the forecast period (2018 – 2024).

If cartilage damage remains untreated, it would lead to knee replacement surgery. Knee osteoarthritis is among the most common diseases, due to factors such as aging and obesity. This further enhances the demand for Cartilage repair surgery as Cartilage tissues ability to repair itself is very limited, as there are no blood vessels, and bleeding is vital in healing. The tissue prevents friction between the bones, by absorbing shock in the joints. When damage is caused in the cartilage, it restricts the regular movement of the knee, causing immense pain. It generally occurs after a traumatic and twisting injury to the knee. Moreover, this growth is further supported by the constant technological advancements in the region.
