Abstracts

The Europe Clinical Nutrition Market would witness market growth of 6.5% CAGR during the forecast period (2020-2026).

The nutrition experts assert that vegan and vegan nutrition will be converted to the mass market as the demand for vegan convenience products increases, ideally packaged in sustainable packaging. A lifestyle focused on vegans and plant-based diet should be broadened to include the areas of sport and fitness. Use (digital) health trackers, performance supplements (such as advanced probiotics), or diagnostic tests (biomarkers, microbiomes, metabolome) increasingly allows consumers to follow their health strategies. In sports nutrition, the trend to consume fewer additional products and optimize performance through specific diets such as a ketogenic diet is noted.

Demand for dietetic treatment is growing, especially in clinics where demand is often overlooked because of limited funding. In addition, consumers are increasingly aware that investing in child nutrition education is a powerful instrument for promoting healthy habits from the very beginning. Our experts say health and fitness education moves from being focused solely on physical exercise to a more holistic approach with a similar emphasis on nutrition and awareness.

Industry players focus on growth strategy using various inorganic approaches, such as

acquisition, partnership, strategic alliance, and others, to gain substantial market share and improve their portfolio. Increasing awareness about clinical nutrition has surged demand for pediatric as well as adult nutrition formulae. Industry players focus on developing a nutritional solution that can satisfy nutritional needs from pediatrics to adults.

Based on Application, the market is segmented into Cancer, Neurological Diseases, Gastrointestinal Disorders, Metabolic Disorders and Other Applications.
