Abstracts

The Europe Colposcopes Market would witness market growth of 5% CAGR during the forecast period (2020-2026).

The growth of the colposcope market is driven primarily by rising cervical cancer incidence and awareness of early diagnosis and the availability of innovative products. Moreover, colposcopy is painless, non-invasive, and blood-loss free and is cost-effective, which has a global impact on the market. Additionally, growing demand in developed countries for colposcopes and the rise in colposcopes in order to diagnose gynecological diseases are other factors leading to market development. Moreover, the untapped capacity of emerging economies provides attractive demand growth prospects over the projected timeframe. The complications of use are however expected to hinder the market growth of the colposcope.

The cancer burden is rising among women in both high-income (HIC) and low- and middle-income (LMIC) countries owing to shifts in the prevalence of cancer risk factors as countries experience economic transformation. The major risk factors include changing patterns of lifestyle, smoking, physical inactivity, excess body weight, and changes in reproductive patterns such as late first birth, as well as fewer births. Therefore, a higher prevalence of cervical cancer due to the above-mentioned factors will drive colposcope market growth worldwide.

Colposcopes have a lighting adjustment knob to alter the light level, a fan to cool the lamp bulbs (when utilizing halogen lamps), and a filter system. The bulb should be

easily adjustable. Halogen light bulbs are efficient and simple to remove, yet emit heat. Light-emitting diode (LED) lamps last longer and generate no heat.

This device's high installation cost and shortage of professional clinical consumers to use the colposcope could somehow hamper the development of this market. In addition, lack of awareness of cervical cancer in low-economic countries will also restrict the colposcope evolution market over the forecast period. Significant complications while doing colposcopies such as bleeding or infection will also sluggish this market's growth.

Based on Application, the market is segmented into Cervical cancer screening and Physical examinations. Based on Product, the market is segmented into Portable, Handheld and Stationary. Based on countries, the market is segmented into Germany, UK, France, Russia, Spain, Italy, and Rest of Europe.
