Abstracts

The Europe Cycling Wear Market would witness market growth of 6.1% CAGR during the forecast period (2020-2026).

Bike riding has been becoming popular among individuals in many European countries, for example, the Netherlands, Finland, and Germany. For example, in April 2018, as per a report published by the Netherland Institute for Transport Policy, bicycles represent 25% of daily mobility by the individuals in the nation for different purposes like recreation, work, shopping, and education. The growing inclination for bicycle utilization for day-to-day activities is anticipated to positively influence market development over the forecast period.

The atmosphere and climate can influence cycling sports essentially; consequently, the focus of manufacturers is on the fabric of the cycling wear. These wears are commonly made of a special material that has a moisture-wicking capacity. Moisture-wicking is the process wherein the fabric pulls sweat off the skin and brings it outside of the piece of clothing, helping the wearer to remain cool. Organizations are investing altogether in research and development in these lines to design innovative items and decrease the sweating issue.

Market development is credited to increase in awareness associated with health and

wellness among consumers all over the world. There has been an increase in health-related issues, for example, diabetes, hypertension, and obesity, among young and middle-aged individuals. Numerous specialists and health mentors advise regular cycling practices to individuals, which assists with decreasing the negative impacts of numerous aforementioned ailments. Moreover, consumers in metropolitan areas these days favor riding bicycles as a feasible method of transportation, which is anticipated to boost market development over the forecast period.
