Abstracts

The Europe Data Center Networking Market would witness market growth of 11.4% CAGR during the forecast period (2019-2025). Large organizations try to allocate their workload on several cloud platforms. This has led to the need to decentralize and break up the infrastructure of the data center. Since organizations would embrace distinct working models of data centers according to their demands, tailored networking platforms are increasingly needed to simplify cloud computing activities. It is anticipated that this will create new market opportunities.

Currently, the workload in a company—and unlimited workload for consumers and entertainers—is carried out on a single computer, and data center networking is, therefore, necessary. The networks provide the servers, customers, applications and middleware with a common map to stage workload execution and also for managing access to their information. A workflow that involves networking between the data centers is coordinated amongst servers and customers in the network. Data is exchanged between servers and customers, however, there is no main supervisor of these transactions for modern datacenters.

Increased demand for data center networking is predicted in the mega data center sector and the increasing colocation trend in developing economies. Mega data centers are a huge environment for processing data, requiring extremely complicated networking solutions for efficient data storage and processing.

Based on Application, the market is segmented into Storage Area Network, Network Security Equipment, WAN Optimization Equipment, Ethernet Switches, Routers & Application Delivery Controllers and Others. Based on End User, the market is segmented into IT & Telecom, BFSI, Retail, Education, Media & Entertainment, Healthcare, Government and Others. Based on countries, the market is segmented into Germany, UK, France, Russia, Spain, Italy, and Rest of Europe.
