Abstracts

The Europe Data Center Rack Power Distribution Unit (PDU) Market would witness market growth of 11.9% CAGR during the forecast period (2020-2026).
The Power Distribution Unit (PDU) controls the voltage in data centers and gives details on the power supply in real-time. They control power effectively in the event of equipment failures. These factors are expected to have a positive impact on market growth. Furthermore, the market is driven by the increasing adoption of cloud-based services. Cloud service providers invest and renovate their existing data centers to manage power efficiently and build new facilities. Nevertheless, due to ongoing coronavirus pandemic, the expansion of several manufacturing facilities has been shut down in order to ensure the safety of employees and citizens.
However, companies are focused on having remote access to their workers in order to maintain business sustainability. PDU providers concentrate on providing solutions that are equipped with monitoring capabilities. Such technologies ensure maximum utilization of the available resources and have the capacity to control energy usage. It helps organizations reduce their power consumption, carbon footprint and increase data center efficiency. This is an estimated increase in demand for intelligent rack PDU between 2020 and 2026.
Increasing data center temperature leads to a requirement for cooling systems, which reduces additional equipment cooling costs. The exhaust temperature is also rising in conjunction with rising temperature in data-center facilities. PDUs are also important for preventing failures of facilities related to overheating, with elevated atmospheric temperature levels. These factors resulted in a high-value power distribution demand
