Abstracts

Increasing need to solve business process-related issues in real time and the need to streamline operations across industries have led to the demand for data fabrics. The demand for on-demand or cloud-based data fabric solutions have significantly grown over the years, as the cloud-based model is a cost-effective and time-efficient solution. The purpose of the data fabric is to clear the storage sprawl used by organizations to address data sprawl. Data sprawl is the result of the growing number of use cases for IT such as multiple types of databases (relational & NOSQL), unstructured data types (legacy NAS, high performance NAS and data analytics) and the core demands of virtualization (server, desktop and containers). Nevertheless, due to limited options, organizations are forced to buy a unique storage system for each of the use cases. Therefore, the whole exercise has resulted in unprecedented storage sprawl within data centers over the last few years.

Based on the component type, the Data Fabric market is segmented into Software and Services. The Services market is segmented into Professional and Managed Services. Professional services are further segmented into Implementation, Consulting & Training and Support & Maintenance.
