Abstracts

Data governance is an organizing framework that is used to establish strategy, policy, and objectives, to both manage and change the way data assets are acquired, managed, maintained, and transformed. The data assets acquired are then used across the company and leveraged to consistently improve business profitability. The custodians or the owners of the data assets in an enterprise are involved in the initial phase of the implementation of a data governance program. Procedures and policies are put in place which specify who is accountable for various portions or aspects of the data, including its accuracy, accessibility, consistency, completeness, and updates. For the effective implementation of data governance, processes are defined concerning how the data is to be stored, archived, backed up, and protected from mishaps, theft, or attack. Standard procedures are developed defining the data usage of authorized personnel. Finally, a set of controls and audit procedures put in place which ensures ongoing compliance relies with government regulations.
