The Europe Deep Brain Stimulation Devices Market would witness market growth of 15.7% CAGR during the forecast period (2019-2025).

Each year over 50 000 Europeans are diagnosed with Parkinson's disease. In addition to this, European scientists have developed a method for delivering a patient-specific brain stimulation therapy. Deep brain stimulation (DBS) is an approved treatment for essential tremor, dystonia and Parkinson's disease. A research program of the European Union called IMPACT is making strides in enhancing and individualizing the deep brain stimulation (DBS) for Parkinson's disease.

Deep brain stimulation (DBS) is a medical technique used to treat many crippling neurological disorders such as Parkinson's Disease (PD) severe motor symptoms such as bradykinesia, stiffness, critical tremor, psychological problems (obsessive-compulsive disorder), and slow motion. Deep brain stimulation therapy is typically prescribed for patients who for at least five years have not reacted to medications. Electrodes are implanted in certain areas of affected brain in this treatment which generates electrical impulses that control abnormal impulses.
