## **Abstracts**

The Europe Digital Workplace Market would witness market growth of 20.7% CAGR during the forecast period (2020-2026).

The demand for remote work continues to grow, powered by global globalization, environmental issues and rising real estate costs. Digital workplaces will increasingly be accessible from any device in any location. Employees look forward to the period of an all-intelligent digital assistant with voice-driven search, and as a good friend, the digital assistant will always know what they need before they get a chance to inquire.

IT organizations are mindful that the nature of the workplaces they offer represents their capacity to respond to customer needs: they must change their programs to this current situation to make the diminishing use of in-house resources. The gap between IT and enterprise will continue to grow until IT companies recognize that they need to improve the way they provide services because they do not want to lose that battle.

Although the idea of an intelligent workplace was originally the responsibility of the IT departments, the Internal Communications teams quickly started to link forces with Technology peers to understand the tremendous effect the resource had on teamwork and connectivity. Presently, HR and other business leaders are taking an increasing interest in streamlining and having a positive impact on the moments that matter within

the employee lifecycle. From recruitment and on-boarding to professional development, training, career development and well-being programs, the Digital Workplace is fast becoming a key business tool.

Based on Component, the market is segmented into Solutions and Services. Services segment is further bifurcated across Professional Services, Virtual Desktop Infrastructure Services, Unified Communications as a Service, Enterprise Mobility Management Services and Others.
