Abstracts

Ethernet allows inter connection on systems over a network. Ethernet is the Europe protocol for a system of wires and cables to be connected to the multiple computers, devices, and machines over a single network to interconnect all the computing nodes. Networking cables are used to connect network devices to other network devices, or to connect two or more nodes to share a peripheral output device such as printer and scanners. Nevertheless, due to the suitability of fiber optic cable in various applications, the fiber optic cables would also gain popularity. Among the plausible applications, the industrial segment dominates the global market, due to the superior performance of Ethernet cables even in extreme conditions. Different types of network cables, such as coaxial cable, optical fiber cable, and twisted pair cables, are used depending on the network's topology, protocol, and size. Various categories of copper cables are used for different transmission speeds.

The Europe Ethernet cable market is segmented based on types, applications, and country. Based on applications, the market is segmented into industrial, broadcast, enterprise, IT & network security, and others (residential & defense). The copper cables segment is a dominant segment within types, as copper cables are cost-effective and flexible, as compared to fiber-optic cables. Nevertheless, due to the suitability of fiber optic cable in various applications, the fiber optic cables would also gain popularity. Among the plausible applications, the industrial segment dominates the Europe market, due to the superior performance of Ethernet cables even in extreme conditions.

Based on country, Ethernet Cable market is segmented into Germany, UK, France, Russia, Spain, Italy and Rest of Europe. Germany remained the dominant country in the Europe Ethernet Cable market in 2015. Russia would witness promising CAGR during the forecast period (2016-2022).
