Abstracts

The Europe Field Programmable Gate Array Market would witness market growth of 6.4% CAGR during the forecast period (2017 – 2023). Field Programmable Gate Arrays (FPGAs) are semiconductor devices which are built around a matrix of configurable logic blocks (CLBs), linked via programmable interconnects. A field programmable gate array (FPGA) is an integrated circuit which could be programmed later in the field after manufacturing. The emergence of non-volatile flash-based field programmable gate arrays can be electrically erased and reprogrammed, and this feature would add to the market attractiveness in the years ahead. With growing design size, faster applications, and reusability of the circuit, verification of the field programmable gate arrays has become mandatory. However, lack of a standard rules for verification is one of the major challenges for the technology adoption.

Based on Technology, the market report segments the market into SRAM, EEPROM, Antifuse, Flash, and Others. Based on Type, the Europe Field Programmable Gate Array market segments the market into High-end FPGA, Mid-end FPGA, and Low-end FPGA.
