The Europe Flat Panel Display Market would witness market growth of 6% CAGR during the forecast period (2019-2025).
Flat panel display is a successor to Cathode Ray Tube (CRT) display that includes either Liquid Crystal Display (LCD) or Light Emitting Diode (LED) displays, making them much lighter and thinner as compared to other displays. These displays are used in the corporate sector and for advertising, educational purposes. Such display screens use various technologies such as Light-Emitting Diode (LED), Organic Light-Emitting Diode (OLED), LCD, and other technologies. However, display technologies including organic light-emitting diode (OLED) have become more common in products like smart wearables, televisions, smartphones, and other devices.
The Flat Panel Display market has seen phenomenal growth due to the proliferation of large-screen smartphones and televisions, attracting a majority of customers from all segments around the world. Over the years, Flat Panel Displays (FPDs), with virtually every accessible electronic gadget combined with flat panel displays have made their presence known in contemporary electronics. Prices falling, technological advances, and emerging-market firm demand bode well for the emerging market. FPDs are expected to gain considerable prominence in buildings and transport solicitations and are expected to be deployed progressively in public display mediums and digital picture frames. The growth of FPDs has been substantial in the television industry, with wall-mounted TVs accounting for a large part of the market. The insistent R&D resourcefulness of FPD manufacturers is anticipated in the near future to unleash a number of innovative flat panel display models.
