Abstracts

The Europe Frozen Vegetables Market would witness market growth of 4.4% CAGR during the forecast period (2017 – 2023). The extended shelf life on vegetables due to freezing has led to an increased demand for different kinds of vegetables. The freezing process involves lowering the temperature to -18°C or below, as at these levels the growth of microorganisms is nullified, reducing possible chemical reactions, and cellular metabolic reactions. The process also helps in retaining the nutritional value in vegetables for longer duration. The freezing procedures allows the preservation of vegetables for an extended time period, without the need for any sort of preservatives and at the same time, prevents microbial growth which could lead to food decomposition.

Based on Distribution Channels, the market report segments the market into Discounters, Hypermarkets/ Supermarkets, and Others. Based on End Users, the Europe Frozen Vegetables market segments the market into Food Service Industry and Retail Customers.
