Abstracts

The Europe Hybrid Imaging Market would witness market growth of 4.04% CAGR during the forecast period (2019-2025).

The use of hybrid imaging in the diagnosis of diseases across different medical fields, including oncology, cardiology, and neurology, has risen sharply in recent years. This results in a growing demand for qualified professionals to capture and understand the data generated by these tools. Thus, numerous institutes and research centers are undertaking multimodal imaging training programs. In the regional market, Europe obtained a larger share in the market for hybrid imaging. The increasing emphasis on creating multimodal imaging in the region is expected to drive the demand in Europe. The European Society for Hybrid, Molecular and Translational Imaging (ESHIMT) is a non-profit organization established in Europe to encourage and organize the professional activities of people working in the field of hybrid imaging. The organization organizes several educational and training programs for doctors, scientists, physicists, technologists, radiographers, and others in the field.

Western Europe recorded an exponential boost in PET/CT scans in 2018. That being said, the installation statistics of SPECT/CT systems increased gradually as compared to PET/CT installations. Government initiatives to build multimodal or hybrid diagnostic imaging technologies are expected to drive the market. For example, European Cooperation in Science and Technology (COST), a government-funded group that helps in the development of research networks, inaugurated a program called Correlated Multimodal Imaging in Life Sciences (COMULIS).

Based on Application, the market is segmented into Oncology, Ophthalmology, Cardiology, Brain & Neurology, and Other Applications. Based on Type, the market is segmented into PET/CT systems, SPET/CT systems, PET/MR systems, OCT/Fundus Imaging System and Other types. Based on End Use, the market is segmented into
