Abstracts

The Europe Implantable Loop Recorders Market would witness market growth of 11.5% CAGR during the forecast period (2020-2026).

Increased incidence of cardiac problems, the technical innovation of cardiac monitors, and demand for remote patient tracking are increasing the market for implantable loop recorders. In addition, physical inactivity related to a sedentary lifestyle raises the likelihood of having chronic cardiac conditions, which are anticipated to fuel the need for cardiovascular care and self-monitoring.

Current developments in cardiovascular diagnosis include wearables, handheld phones, remote patient monitoring, and telemetry. Innovations have increased diagnostic precision and speed, making instruments smaller, simpler to use, and more convenient to wear. Technological developments have made some devices ultralight and mountable to the skin with wireless, adhesive electrodes. As disease prevalence increases — largely due to lifestyle risk factors — cardiovascular diagnostics and monitoring devices are increasingly popular.

Current trends in cardiovascular diagnosis include wearables, handheld phones, direct patient monitoring, and telemetry. Innovations have increased medical accuracy and speed, making devices smaller, easier to use, and more convenient to wear: huge, bulky electrocardiogram (ECG) instruments have become pen-sized; complicated Holter devices with electrodes and wires have become simple, disposable patches. These new

ECG outpatient devices provide patients with greater flexibility for day-to-day operations and are capable of transmitting data through smartphone applications to physicians.

Based on Application, the market is segmented into Atrial fibrillation, Cardiac Arrhythmia and Cardiac syncope. Based on End User, the market is segmented into Hospitals, Cardiac Centers and Other End Users. Based on countries, the market is segmented into Germany, UK, France, Russia, Spain, Italy, and Rest of Europe.
