Abstracts

An in-memory database (IMDB, also main memory database system or MMDB or memory resident database) is a system that majorly relies on the computer's main memory to store data and is different from a database management system which uses a disk storage mechanism. Superior data processing speed, cost effective RAM prices, and massive amount of data being generated from various industries would be the major drivers for the market growth during the forecast period. Simpler internal optimization algorithms and fewer CPU instructions make main memory databases relatively faster than disk-optimized databases. The in-memory OLAP solutions help organizations in diving deep into the data and explore entire data much faster and present ultra-low latency platform enabling real-time decision-making.

Based on the Data type, the In-Memory Database market is segmented into Relational, NoSql and NewSql. Based on the Processing Type, the market is segmented into Online Transaction Processing and Online Analytics Processing.
