Abstracts

The Europe Inflation Devices Market would witness market growth of 3.6% CAGR during the forecast period (2019-2025).

Factors such as the rise in cardiovascular disease prevalence and the increase in the number of surgical procedures performed worldwide. In addition, an increase in healthcare spending worldwide is another factor leading to market growth. Furthermore, the increase in the geriatric population across the globe serves as a significant driver of the global demand for inflation tools. Costly surgical procedures, however, limit the market growth.

Interventional Cardiology is a field of medicine within the cardiology subspecialty that uses advanced imaging and other diagnostic methods to determine blood flow and pressure in the heart's coronary arteries and chambers, as well as clinical procedures and medications to treat disorders that affect the cardiovascular system's functioning.

The growing acceptance of minimally invasive procedures, the emergence of advanced healthcare facilities in a majority of developing countries, the rising prevalence of CVD

and the less rigorous approval procedures lead to market development. The severity of coronary artery disease is also anticipated to increase with the growth of the geriatric population, which is a major target indicator for interventional cardiology procedures that use an inflation device to inflate and deflate the balloon. These primary factors are expected to fuel market growth over the forecast period.

Based on Application, the market is segmented into Interventional Cardiology & Radiology, Urological Procedures, Peripheral Vascular Procedures and Gastroenterological Procedures. Based on Display Type, the market is segmented into Analogue Inflation Devices and Digital Inflation Devices. Based on End User, the market is segmented into Hospitals & Clinics and Ambulatory Surgical Centers. Based on countries, the market is segmented into Germany, UK, France, Russia, Spain, Italy, and Rest of Europe.
