IT operations analytics (ITOA) is the method used to monitor systems and gather, process, analyze and interpret data from various IT operations sources, to identify potential threats, and assist in making decisions. Information is gathered from both live and older data from applications, services and infrastructure hardware logs. Other than aforementioned sources, IT operation analytics gathers data from other sources such as software agents running in operating systems or hypervisors gathering data relevant to I/O, transactions and resource usage. The results of the scripted tests are accordingly, with the real-time analysis of running protocols in a network.
