## Abstracts

The Europe Mass Notification Systems Market would witness market growth of 16.7% CAGR during the forecast period (2019-2025). A mass notification system (MNS) is implemented to transmit notifications to clients, residents, staff and public officials in order to maintain everyone informed during a particular case or disaster. These systems are highly crucial in coordinating with the population during rescue and relief activities needed in natural disasters with earthquakes, floods and hurricanes. These systems are highly crucial.

Mass notification systems provide the communication technology at the core that warns and guides individuals about possible security measures in the event of risk. Once compiled on the MNS, multiple formats like SMS, e-mail, social media, web, RSS and other formats allow for the simultaneous communication. The advent of mobile mass notification applications that enables better management of accidents and alerting users using simple and interactive dashboards is a major technological advance that focuses on leading players operating on this market.
