Abstracts

The Europe Medical Imaging Workstations Market would witness market growth of 6.7% CAGR during the forecast period (2019-2025).

Workflows at a hospital are widespread. When patients enter the healthcare setting, there are workflows for admission, discharge, transfer; diagnosis; various radiology-specific activities including image acquisition, post-processing, and image processing; drug delivery and administration; and sedation and anaesthesia. Eventually, these workflows need to work in a coordinated manner to allow for a complex surgical procedure. There is a surgical workflow inside the operating suite which includes the processes, implementation, and information present in this environment.

Integrated workstation data can help to better scale a hip prosthesis, insert a hip prosthesis, decide the dimensions of a custom bone plate, define screw placement, etc. The incorporation of expertise from a variety of sources and the simple and comprehensible transmission of this information to the surgeon can be accomplished using workstations.

Europe's medical imaging workstations industry is growing significantly and the growth is attributable to government initiatives and supreme infrastructure. Germany accounted for the largest share in the European market for medical imaging workstation in 2018 and is expected to show the highest growth over the forecast period. The large share and high growth in Germany are primarily attributable to the country's better reimbursement scenario relative to other European countries, broader acceptance of multimodality mammography workstations by major end-users (such as hospitals, surgical facilities, and breast care centers), and increased patient demand for enhanced cancer screening.

Based on Usage Mode, the market is segmented into Thin Client Workstations and Thick Client Workstations. Based on Modality, the market is segmented into Computed Tomography (CT), Magnetic Resonance Imaging (MRI), Mammography and Ultrasound. Based on Component, the market is segmented into Visualization Software and Hardware. Based on Application, the market is segmented into Conventional Imaging and Advanced Imaging. Based on countries, the market is segmented into Germany, UK, France, Russia, Spain, Italy, and Rest of Europe.
