Abstracts

The Europe Microcrystalline Cellulose Market would witness market growth of 4.5% CAGR during the forecast period (2019-2025).

Microcrystalline cellulose (MCC) powder has been chosen as a natural strengthening for a commonly used commercial acrylic adhesive in the field of art protection and conservation. Due to the introduction of MCC, a thermogravimetric analysis showed an increase in thermal stability even at low filler quantities, while DSC measurements showed that the glass transition temperature gradually increases with the MCC content. An improvement in elastic modulus and creep stability with regard to smooth resin and an improvement in fracture toughness were determined by MCC addition.

Microcrystalline cellulose manufacturers and research organizations around the globe have spent strongly in creating microcrystalline cellulose of high quality and low-priced. In addition, multiple methods such as reactive extrusion, steam explosion, enzyme, and acid hydrolysis, which are mediated to boost productivity, are being studied thoroughly.
