Abstracts

The Europe Multi-Layer Ceramic Capacitor (MLCC) Market would witness market growth of 4.6% CAGR during the forecast period (2019-2025).

The simplest structure used by capacitors to store electrical charge consists of a couple of electrodes separated from each other by a dielectric. The electrical charge that can be stored is one of the indices used to express the efficiency of a capacitor. For a multi-layered ceramic capacitor, the amount of charge it can store is increased when the same structural level is repeated. After the dielectric raw materials are completed, they are mixed and pulverized into a slurry-type paste with multiple solvents and other substances. This paste is then created into thin sheets and the materials are transformed into completed multilayer ceramic capacitor chips after being passed through several manufacturing procedures.

MLCC companies focus on providing new types of ceramic capacitors such as ultra-small capacitors, high-volume capacitors and low-volume Equivalent Series Inductance (ESL) condensers to satisfy clients' varying requirements. Furthermore, companies invest strongly in R&D operations in order to create advanced MLCCs that can resist the extremely competitive industry.

Based on Type, the market is segmented into General Capacitor, Array, Serial Construction, Mega Cap and Others. Based on End User, the market is segmented into Electronics, Telecommunications, Data Transmission, Industrial, Automotive and Others.
