## Abstracts

Network-as-a-service (NaaS) is a model that is used to deliver network services virtually over the Internet. The services can be availed either on pay-per-use or monthly subscription basis. The service is seamless as all that is needed is to create an information technology (IT) network on one computer, Internet connection and finally, access to the provider's NaaS portal. New businesses can take advantage of the concept, as it would not require too much investment. There would be barely any need for sophisticated hardware and software; therefore, the need for expert technical staff doesn't arise. As the network is virtual, all its complexities are hidden managed externally.

Healthcare service providers have been investing on the cloud-based solutions, such as wireless communication solutions, to offer superior quality services to the end users. Wireless solutions and services significantly improve the operational efficiency. Hospitals have geared up to adopting NaaS methods such as NFV solutions to create positive output and as a result have better revenue margins.
