## Abstracts

The Europe Neutropenia Treatment Market would witness market growth of 6.2% CAGR during the forecast period (2020-2026).

Neutropenia occurs when a person has low levels of neutrophils, a type of white blood cell. Neutrophils are formed in the bone marrow, which is the spongy tissue contained in larger bones, such as the vertebrae, ribs, and pelvis. White blood cells help the body battle infections. Neutrophils fight infection by removing toxic fungi, yeast, and bacteria that invade the body. People with neutropenia are at greater risk of contracting severe infections. Half of the cancer patients undergoing chemotherapy experience a level of neutropenia. Neutropenia is a common side effect in people with leukemia.

Growing cases of leukemia across the globe and a shift to the use of biosimilars from branded drugs in cancer-supporting treatment are driving the growth of the global neutropenia treatment market. Nevertheless, the high cost of treatment associated with neutropenia and the strict government regulations for product approval reduce the growth of the market. On the other hand, the increase in R&D activities for the development of new drugs creates new opportunities for market players in the coming years.

Novel treatments combined with growing cases of chemotherapy-induced neutropenia are one of the primary drivers of market growth. In addition, the novel drug delivery strategy also increases patient convenience, leading to greater adherence to the patient and thereby stimulates the growth of the market. Moreover, since cancer is a known cause of developing neutropenia, increasing cases of chemotherapy for cancer treatment will be a growth driver for the neutropenia treatment market.
