Abstracts

The Europe Odor Control System Market would witness market growth of 6.7% CAGR during the forecast period (2020-2026).

Rapid industrialization has greatly contributed to environmental pollution in a number of developing and industrialized countries. Thus, the increase in the number of manufacturing facilities has resulted in the unregulated emission of gases and chemicals into the atmosphere. This mixture of different gases and chemicals allows malodor to be released into the surrounding environment. However, increasing awareness among end-use industries about the use of odor control systems is creating further opportunities for market growth.

The high cost of odor control systems, combined with high operating costs, is expected to impede market growth. Nevertheless, stringent government regulations and policies imposed on end-use odor control industries are likely to drive the demand during the forecast period. The Governments of several countries have adopted certain norms for the emission of gases in the environment. As a result, manufacturing facilities have to comply with the laws developed in order to carry out their processes.

Europe is projected to see substantial growth over the forecast period. The main end-use industries that lead to the emissions of gas in the atmosphere include energy and power and the chemical industry. Various causes of odor generation are due to the burning of fossil fuels in the generation of electricity, industrial processes and solvent

use, and the handling of waste. As a result, in order to comply with government requirements for gaseous emissions in the environment, the industry is adopting odor control systems.

Based on System Type, the market is segmented into Activated Carbon Odor Control System, Chemical Odor Control System and Biological Odor Control System. Based on End User, the market is segmented into Power & Energy, Chemical & Petro Chemical, Cement, Mining & Metal and Others.
