Abstracts

The Europe Optical Brighteners Market would witness market growth of 5.84% CAGR during the forecast period (2019-2025). Increased demand from the cosmetic industry for optical brighteners has fueled market growth for optical brighteners across the globe. These chemicals are used to brighten the dark areas of the skin around the eyes like dark circles.

Most paper companies are using optical brighteners to enhance the paper's visibility, which would eventually increase demand. Optical brighteners are also used to improve the fabrics' appearance. In certain polyols, like polyethylene glycol, it's used as an additive to increase the emissions of blue light and thus promote market growth. Nevertheless, the government imposes strict regulations along with which the paper industry is also declining. The two factors could collectively hamper the growth of the optical brightener market.

The fabric application segment is also expected to see promising growth over the forecast period due to consumer inclination towards bright and durable fabrics. Companies use different optical brightener formulations to produce end-products of high quality. Consumers concentrate on convenience as well as improving the functionality of their dishwashing and laundry agents, which will have a positive impact on the demand of the product.

Security and safety section has also experienced substantial demand in the past due to a wide range of applications including fluorescence on banknotes and product labels. Numerous superior optical brighteners' features, like blue light emissions and high transparency, have led to an increase in the demand for the chemical in this segment.

Due to their excellent whitening properties, optical brighteners are widely used in the cosmetics industry. Brightening agents have been used in various cosmetic products to

minimize dark skin shades and circles. In cosmetic products, whitening agents play a key role. Cosmetic companies use stilbene and diphenyl pyrazoline mainly to enhance product quality. In the near future, this is expected to fuel the demand for optical brighteners. Also, for whitening pulp and paper products, optical brighteners are used extensively. Through applying fluorescent agents to paper pulp, they improve their attractiveness. The increased demand for paper products worldwide has been projected to drive the optical brightening market in the years to come.
