## Abstracts

The Europe Patient Portal Market would witness market growth of 16.8% CAGR during the forecast period (2019-2025).

A patient portal can assist patients in easily completing online forms and booking appointments online. They can also help save the patient time and money from unnecessary visits to hospitals and clinics. Patients can search their medical records/history online, send and receive messages from and to their care providers, as well as consult. The patient portal provides patients access to 24x7 healthcare records/information, which makes their work easier as these data can be accessed from anywhere in the world at any time.

A recent trend witnessed in the patient portal market was the implementation of cloud-based systems to share information between the doctor and the patient. Services such as on-demand video doctors are also gaining popularity for non-critical treatment. Such new tools/features in the patient portal improve collaboration between healthcare services and increase patient satisfaction. An increase in the number of healthcare facilities embracing patient portals boosted the growth of the patient portal market. Further, higher demand for Electronic Health Record (EHR) and mandatory federal standards are also responsible for increased use of patient portals.
