Abstracts

The Europe Pediatric Imaging Market would witness market growth of 9.1% CAGR during the forecast period (2020-2026).

Pediatric Magnetic Resonance Imaging, or MRI, is a tool used to take pictures of a circular tunnel in the middle. MRI uses radiofrequency to produce detailed two- and three-dimensional representations of the body of the infant, without radiation being used. Children's MRI is versatile and especially helpful for viewing tissues and organs anywhere in the body that usually can only be seen by surgery.

The use of computed tomography (CT) in pediatric diagnostic imaging is usually difficult but the technique is complicated when paired with an ability to reduce the radiation exposure associated with this imaging modality. Although new methods have been introduced to promote radiation mitigation in line with the advent of faster multidetector computed tomography (MDCT) scanners, it remains the clinical practitioner's duty to ensure that every request for examination is justified and the scanning procedure and parameters selected are optimized to meet the individual patient's specifications.

An x-ray exam is a non-invasive diagnostic procedure that helps physicians detect chronic problems and treat them. X-ray examinations require a small dosage of ionizing radiation to create images of the body's interior. X-rays are the oldest type of medical

imaging and the most commonly used. X-rays use contrast content to help in the detection of different diseases in the upper and lower intestinal tract. Radiography of the upper gastrointestinal tract, also called an upper GI review, looks at the esophagus, stomach, and first part of the small intestine (duodenum). The images are created using a special type of x-ray called fluoroscopy and a swallowed contrast element, such as barium.

Based on End Users, the market is segmented into Hospitals, Diagnostic Centers and Others. Based on Modality, the market is segmented into Magnetic Resonance Imaging (MRI), Computed Tomography (CT), Ultrasound, X-ray and Others.

Based on Application, the market is segmented into Orthopedics, Gastroenterology, Cardiology, Oncology, Neurology and Others. Based on countries, the market is segmented into Germany, UK, France, Russia, Spain, Italy, and Rest of Europe.
