Abstracts

Personal Identity Management (PIM) is the set of rules, standards and algorithms used by individuals and organizations to control the share and use confidential information with other individuals and organizations. Personal Identity Management solutions are ingrained with the capabilities of managing identity, namely usernames, passwords, and other personal information. The content management application is expected to be the dominant segment within the Personal identity management market and it is anticipated to be the largest contributor to the market share during the forecast period. As the adoption of Bring Your Own Devices (BYOD) is gaining prominence within the enterprise levels, the access control segment is anticipated to play a pivotal role in changing the identity management landscape and grow at the highest growth rate during the forecast period. The need for increased scalability, speed, 24/7 customer support, and enhanced management capabilities would propel the cloud deployment model grow at the fastest rate. Small and Medium Enterprises (SMEs), in particular, are largely opting the cloud deployment, as the model can cut costs pertaining to hardware, software, storage, and technical staff.

The report highlights the adoption of Personal Identity Management. Based on the component type, the Personal Identity Management market is segmented into Application and Services.
