Abstracts

The Europe Private Cloud Server Market would witness market growth of 28.4% CAGR during the forecast period (2019-2025). As companies keep moving their business to a host IT infrastructure, the growing need for robust security & privacy, customization, and compliance exists. Because data is of utmost importance to both large enterprises and small and medium-sized enterprises, any loss of confidential data can lead to significant business losses. Private cloud servers solutions not only reduce data loss issues, but also enable companies to embrace the trend of bring your own device (BYOD) and mobile workforce deployment. The data recovery solutions offered by these software providers also help to eliminate the data loss issues.

Organizations are expected to make active investments to restructure the traditional IT infrastructure. This will be coupled with the constant adoption of cloud computing technology. Collectively, these factors are expected to fuel the market growth over the coming years. Another factor expected to drive market growth from 2019 to 2025 is the increasing focus on implementing cloud computing technology in developing nations. Companies with fairly predictable and consistent resource requirements consider using a private cloud in addition to those with HIPAA or other compliance issues. Such companies are more likely to be able to optimize their assets, thus spending on the cloud, and less likely to take complete advantage of the elasticity (one of the public cloud's main strengths).
