## **Abstracts**

The Europe Prosthetics and Orthotics Market would witness market growth of 4.2% CAGR during the forecast period (2019-2025).

Europe's Orthopedic Prosthetics market is projected to record a substantial growth rate over the forecast period. This market growth can be attributable to advances in technology in the designing and manufacturing of orthopedic prosthetics, and the rising occurrence of injuries and road accidents. An orthopedic prosthesis is an artificial limb designed to replace the mislaid portion of a patient's flesh. The protocol generated by orthopedic prosthetics requires a combination of small weight and very large resistance. Subsequently, materials such as Kevlar, carbon fiber, and titanium are commonly used for development. Orthopedic prosthesis applies to the field of diagnosis, growth, manufacture, and modification of custom artificial limbs in left-handed individuals due to injury, disease or genetic illness.

Lower limb prostheses can tackle walking & standing mobility, shock absorption, energy storage & return, cosmetic appearance and other functional needs associated with running, jumping, and other athletic activities. Upper limb prostheses can tackle grasping & reaching, certain workplace difficulties like hammering, painting, weightlifting, and everyday activities such as writing, eating, and dressing. Orthoses may be used to protect the limbs of patients with illness or injury by controlling,

restricting, directing, or immobilizing a part of the joint, limb, or body. These can be used to facilitate (mechanical) movement, restrict movement, as a healing tool after removing a cast, fix the shape or function of part of the body, to relieve weight-bearing strain, or to ease the pain.

Patient outcomes are improved when the goals of patient activity match those of the component built for that activity. Careful assessment of components, such as overall weight, control options and compatibility with other components, is important for the development of functional prosthesis.

Based on Type, the market is segmented into Orthotics and Prosthetics. Based on Orthotics Category, the market is segmented into Upper limb, Lower limb and Spinal. Based on Prosthetics Category, the market is segmented into Upper extremity, Lower extremity, Liners, Sockets and Modular components. Based on countries, the market is segmented into Germany, UK, France, Russia, Spain, Italy, and Rest of Europe.
