## Abstracts

The Europe Radiology Information System Market would witness market growth of 7% CAGR during the forecast period (2019-2025).

The introduction of a RIS would help the staff work more efficiently, resulting in lower medical errors and transcription errors in charts and allowing the physicians to produce more outstanding diagnoses. Also, radiology information systems are essential for coordinating treatment across service divisions, such as sending reports from the imaging department to the primary health care provider of the patient.

Physicians can integrate multiple functions into one comprehensive system with a Radiology Information System in place. The system can remove redundant actions, improve the productivity of their staff, and provide easier access to critical data. The RIS streamlines processes including registration, scheduling, billing, and reporting on results so that more patients can be handled by the employees.

When organizations rely on the typically large amount of paper documents stacked on a clipboard, registration of a new patient is a time-consuming and complicated task. The information needed is sometimes irrelevant due to the design of paper forms-this was pretty much the situation before easy access to computerized systems. But this can be changed with radiology information systems where the staff has to type in the necessary information once and never have to waste their time in feeding details again and again. Based on Mode of Deployment, the market is segmented into Web-based, On-premise and Cloud-based. Based on Product, the market is segmented into Integrated Type and Standalone Type. Based on End Use, the market is segmented into Hospitals & Clinics, Outpatient Department (OPD) Clinics and Others. Based on countries, the market is segmented into Germany, UK, France, Russia, Spain, Italy, and Rest of Europe.

The market research report covers the analysis of key stake holders of the market. Key companies profiled in the report include Cerner Corporation, Epic Systems Corporation,
