Intelligent transportation system is an integration of communication system and information technologies, designed primarily for improving safety, security and efficiency in transportation network. It is an advanced system form of system that would eventually gain over traditional form of transportation systems.

The market size of Roadways & Railways Intelligent Transport Systems in Europe is estimated to be USD 6,372.8 Million in 2015 and is expected to attain a market size of USD 6,587.3 Million in 2016. The market is expected to grow at a CAGR of 5.3% during the forecast period (2016 – 2022).

The developing regions have many impediments to growth, and road traffic jams have and will be a major problem causing massive delays, increased fuel wastage and monetary losses. The fast changing regional landscape has led to poorly planned road networks. Due to unplanned road networks, small critical areas become the hot-spots for congestion and ineffective and poor traffic management around these hotspots potentially results in extended traffic jams. Privatizations of highways and road pricing have been some initiatives proposed to reduce congestion.

Roadways segment dominated the Europe Roadways & Railways ITS market in 2015. The segment generated revenue of USD 4,086.4 Million in 2015, and is expected to grow at a CAGR of 5.2% during 2016 - 2022. Railways is expected to generate a revenue of USD 3,260.1 Million by 2022 growing at a CAGR of 5.5% during the forecast period.

The different types of mode of transport discussed in the report include roadways, railways, aviation and maritime. As the Roadways ITS solutions, the components and
