## **Abstracts**

The Europe Satellite Data Services Market would witness market growth of 24.1% CAGR during the forecast period (2020-2026).

Increasing data demand encourages satellite companies in the lower and medium Earth's orbits to launch small satellite constellations. In addition, the use of nanoparticles in sensors gives increased sensitivity due to their small size and surface area, making precise data and sound decision-making imperative.

The growing NewSpace movement offers players in the market for satellite data services various opportunities. The capabilities of satellites turn and improve companies significantly in order to add more productivity and transparency to various sectors through a near real-time view of every corner of the globe. The democratization of space means the involvement of a variety of businesses in the space industry and a broader range of players, services and technology.

At the present, innovations like IoT and data science are immensely invading the world. Basically, these data-supported technologies are hungry data. The more data these technologies are given, the better the results. On the basis of these defense forces, many projects are being built to achieve positive results for their country. This drives the growth of the satellite data services market.

AI has the ability to increase human intelligence and allow intelligent decision taking, along with rising data storage and computing capacity. AI will eliminate the immense cost of an incorrect decision because it would essentially eradicate human bias and mistakes. In addition, this may accelerate the decision-making process. This is expected to create lucrative opportunities for satellite services to expand.
