The Europe Secure Web Gateway Market would witness market growth of 16% CAGR during the forecast period (2019-2025).

The gateways search or filter the URLs of the websites against stored website lists–all those which are not included in the approved lists can be blocked directly. Also, known malicious sites can be blocked directly. URLs maintaining permissible web addresses are kept in whitelists while known, specifically blocked sites are kept in the blacklists. These lists are maintained by companies in the secure gateway database, and all incoming and emerging traffic are covered by the list filters afterwards.

Secure web gateways have become more popular as cyber-criminals have evolved into relatively harmless or professional websites in embedding threat portals. Such fake websites can breach users' access to the enterprise, release malicious code, and gain unauthorized access without the user's knowledge. The fake, illegal websites can sometimes be very convincing.

Some of these websites seem so real that they can convince users to enter credit card and personal identification numbers like social security numbers. Many sites only need links with the user to bypass Web browser controls and insert malicious code into the

network of the user, such as viruses or malware.
