Abstracts

The Europe Security as a Service Market would witness market growth of 15.5% CAGR during the forecast period (2018 – 2024).

With the evolution of the telecommunications industry and its inclination towards a digital business model, key players increasingly adopt cloud-based services. This provides a wide range of advantages like cheaper services, additional computing power and easy availability of storage space. Telecom companies offer more affordable, agile and enhanced services by clicking on the cloud model available on the Internet on demand. However more reliance on the cloud is a double-edged sword, given that the threats to hackers and cyber attackers posed by cloud computing are huge. It is highly likely that telecom companies will possess personal information about individuals such as names, addresses and credit card numbers, which will lead to identity theft and financial loss when hacked. There is also a strong risk that this sensitive information will be misused. The global security as a service market is thriving and it provides the much-needed security to the cloud infrastructure to prevent hacking and misuse of personal data and information from organizations.

Based on Component, the market is segmented into Solutions and services. Based on Application, the market is segmented into Network Security, Endpoint Security, Application Security, and Cloud Security & Others. Based on Organization Size, the market is segmented into large enterprises and SMEs. Based on End User, the market is segmented into BFSI, Telecom & IT, Healthcare, Retail, Manufacturing, Government, and Others.
