Abstracts

The Europe Self-checkout Systems Market would witness market growth of 13% CAGR during the forecast period (2020-2026).

The European market for self-checkout systems is seeing tremendous growth due to the rise in the number of retail outlets. The number of retail stores that implemented these systems increased significantly over the past few years. In addition, the rise in the positive response of consumers and the input from using these systems facilitate the implementation of self-checkout technologies.

Consumer awareness and acceptance are the main factors driving the adoption of these systems. The introduction of contactless payment technology and growing consumers' inclination for card-based payment has led to increased demand for cashless systems. Another trend in the field is the introduction of facial recognition technology into the systems which will help to recognize shoplifters.

UK supermarkets that have been experimenting with mobile scan-pay-go can see more customers in stores adopting the technology because of social distancing requirements amid the expanding coronavirus epidemic. Although the supermarkets claimed positive responses from shoppers to scan-pay-go, difficulties with scanning products and registering for the loyalty cards needed by the apps were also recorded. But consumers can decide it's worth putting up with the stress to avoid being at the checkout close to fellow shoppers. Fears regarding COVID-19 have given a major boost to the mobile and

contactless payment schemes.
