The Europe Smart Biopsy Market would witness market growth of 4.92% CAGR during the forecast period (2019-2025).

Novel non-invasive tools have been developed which allow the characterization of cancer tissue in real-time. These tools are referred to as smart biopsies and have already been used in several hospitals to speed up cancer diagnosis. Bringing these projects from the laboratory bench into a medical setting will make cancer diagnosis faster and cheaper, leading to earlier access to the right treatment for patients and providing a clear opportunity for players to get them there.

One of the challenges of carrying out surgery on a brain tumor is that it is necessary to prevent any damage to the blood vessels. The reason being, such damages can cause bleeding and even prove to be fatal. Through advancements in brain imaging surgeons can navigate their method accurately— this has made surgical procedures much safer. With the development of a new high-tech biopsy needle that carries a tiny imaging probe inside to help guide the way, biopsy procedures are now expected to become smoother.

In addition, growing awareness of various diseases, particularly among women with an unhealthy lifestyle, is expected to boost the demand for smart biopsy devices. As per the National Center for Biotechnology Information (NCBI), one of the most common cancers among women in Europe is cervical cancer, primarily among women over the age of 45.
